

safend auditor v3.0

Comprehensive Endpoint Visibility

endpoints: what you can't see can hurt you

In the world of security, the unknown is always the greatest threat. In the realm of endpoint security, this threat is multiplied by thousands – and often tens of thousands - of individual ports, interfaces, and devices that connect to networks every day.

With an estimated 60% of sensitive corporate data residing on these endpoints (IDC), and internal IP theft via USB ports alone harming almost 40% of enterprises (Yankee Group) – today's network administrators and security officers are getting up close and personal with endpoints.

They're looking for detailed, high-resolution visibility of actual individual endpoint activity - ongoing and historical. Because only through an in-depth understanding of what's happening at the endpoint can security professionals define and enforce endpoint security policies that are in-line with real-world usage.

safend auditor v3.0: knowledge is power

Safend Auditor gives administrators the power to discover who's connecting what to each and every corporate PC.

A lightweight, intuitive, clientless software utility, Safend Auditor illuminates enterprise endpoint blind spots – providing organizations with the visibility necessary to identify and effectively manage endpoint vulnerabilities.

With Safend Auditor, administrators can differentiate between secure productivity enhancers, such as authentication tokens, and potential security threats, such as mass-storage MP3 players. Safend Auditor also tracks which WiFi networks employees are connecting to - secure encrypted networks or exposed public networks. Using data gathered by Safend Auditor, administrators can map out granular security policies that exactly meet their business needs.

SAFEND AUDITOR V3.0 DELIVERS

- Comprehensive visibility of who's connecting what to corporate endpoints
- Visibility over all USB, PCMCIA, FireWire and WiFi ports
- Granular record of all current and past device connections
- Quick ramp-up, zero overhead, short learning curve
- Simple and powerful reporting

rapid scanning of all network endpoints

With no endpoint client installation required, Safend Auditor transparently and rapidly queries all organizational network endpoints, locating and documenting all devices that are or have been locally connected. Safend Auditor checks all USB, PCMCIA, FireWire, and WiFi ports – granularly identifying endpoint devices connected for each user, both currently and historically.

The screenshot shows the Safend Auditor interface. At the top, there's a menu bar with 'File', 'Settings', 'Support', and 'Help'. Below that is the 'SAFENDAUDITOR™' logo. The main area is divided into two sections: 'Audit Summary Report' and 'Device Audit Report'.

Audit Summary Report

	Total	Connected
Total Computers	17	
Accessed Computers	2	
Successfully Audited	2	
Protected by Safend	0	
USB Devices	100	3
PCI/PCMCIA Devices	5	0
FireWire Devices	0	0
Internal Storage Devices	0	0
WiFi Networks	7	
Storage Devices	59	0
Communication Adapters	7	1

Device Audit Report

Computer	User	Connected	Port	Type	Device Type	Description / Network	Device Info	Vendor	Model
Heath	HeathWay	25	USB	Storage	Removable Media	USB Mass Storage Device	Crucial Rev.	RTM	8320

Heath	HeathWay	25	USB	Storage	Removable Media	USB Mass Storage Device	USB Flash Disk	080c	0834

easy to understand reports

The results of the Safend Auditor audit are viewable in HTML format, or as an XML table that is easily exported to Excel or other applications for additional analysis and review. The report identifies devices by type, manufacturer, model and serial number, and users according to their Active Directory definitions.

SAFEND AUDITOR ADVANTAGES

- simple and easy to use**
Administrators simply choose the group of computers to audit, and view the results immediately
- comprehensive coverage**
Identifies all USB, FireWire, and PCMCIA devices, and WiFi network connections
- current and historical audits**
Reports all devices currently or previously connected to any endpoint
- precise device identification**
Gathers detailed device information, allowing tailoring of security policies to exact vulnerabilities
- clientless**
Runs without endpoint client
- low resource consumption**
Audits take minutes and do not affect network performance
- intuitive output**
Audit results presented in easy-to-read HTML or XML report, easily exportable to MS Excel
- seamless compatibility**
Fully compatible with existing network management or administrative tools such as Active Directory
- endpoint specific audits**
Easy auditing of selected endpoints, Active Directory groups, IP address ranges, or the entire enterprise

WHAT'S NEW IN SAFEND AUDITOR V3.0

● WiFi auditing

Discovers to which WiFi networks each endpoint is connected, along with all relevant parameters such as the access point MAC address, SSID, and authentication and encryption scheme

● enhanced reporting functionality

Additional audit filters allow scanning network for specific device type or device model, resulting in significant time savings

endpoint control – integration with safend protector v3.0

Safend Protector v3.0 is the industry's most comprehensive, secure and easy-to-use endpoint security solution - controlling every endpoint and every device, over every network or interface. Seamlessly integrated with Safend Protector, Safend Auditor allows easy transfer of devices discovered in audits to Safend Protector's "whitelist" of approved devices.

about safend

Safend is a leading provider of innovative endpoint security solutions that protect against corporate data leakage and penetration via physical and wireless ports. Safend's products, available exclusively through resellers worldwide, are deployed by security-aware government agencies and multinational enterprises in sectors such as healthcare, finance and technology across the globe. The privately held company, founded in 2003, is headquartered in Tel Aviv with offices in Philadelphia.
