

Do you know what USB devices are connected to your endpoints?

Non-intrusive and clientless auditing of all USB devices that are or were connected to PCs throughout the enterprise

Do you know what is connected?

The USB port is a standard component on nearly all computers today, yielding a wealth of convenience and connectivity. The abundance of devices of different types and functions, from removable storage, printers, digital cameras, PDAs and smart phones to WiFi, Bluetooth and IrDA adaptors, can all be simply connected via USB ports. With Plug-and-Play, devices connect instantly.

Some USB devices have over 80GB of storage while others can turn a single endpoint into an unprotected gateway to your entire network putting your intellectual property and corporate records at risk for theft or destruction.

At this moment, dozens of devices may be connected to your network.

Consider the following questions:

- Do you know what is connected?
- Can you identify these devices?
- Are they permitted or are they breaching your security?
- Are you equipped to locate the security breach and identify the intruder?

Safend's USB Auditor Solution

With the USB Auditor you can immediately begin capturing critical data that gives you instant answers to the who's and what's regarding all USB ports in your organization. The USB Auditor is a non-intrusive clientless software solution that captures the critical data that you need from each USB port.

The USB Auditor creates a report displaying the USB devices currently connected to your network and those that were recently connected. For even more convenience, the USB Auditor can export this report to an MS Excel file pre configured with the most commonly used queries.

Main Features

- Non-intrusive, clientless and easy to use
- Reliable and precise USB device identification
- Comprehensive report of all USB devices currently or previously connected to any endpoint
- Immediate report or MS Excel report
- Easy to use query tools
- Fully compatible with active directory
- Run the audit only on selected PCs, groups or the entire enterprise
- Fully complements Safend's USB Port Protector™

As much as 60% of corporate data resides unprotected on PC desktops and laptops.

IDC Report, 2003

Losses from insider net abuse: \$10.6 billion/year. Losses from IP theft: \$11.46 billion/year.

CSI/FBI Computer Crime & Security Survey, 2004

"USB flash drives, MP3 players and the like are everywhere nowadays. Giving your staff free rein to use them at work could lead to breaches of security and loss of data".

Gartner Research, July 2004

Easy-to-Use Interface

Select which endpoints you wish to audit, and wait for the report

Audit Options

Please select the computers to audit. You may specify an OU from your domain controller, or name a specific computer on your network.
